

Still having Wi-Fi problems? Maybe it's time to consider a Mesh Wi-Fi solution

Are you having trouble connecting to Wi-Fi when you're in certain areas of your home? Does your device suddenly disconnect from the network for no apparent reason? Does it take forever to download large files? Do streaming movies pause or stop altogether?

Is all this happening even though you've upgraded your router, placed it in the best location, and are using the settings recommended by your service provider?

If so, it may be time to consider a different type of home Wi-Fi solution, one that's designed to address the most common problems people experience in their home Wi-Fi networks. The best alternative right now to standard home Wi-Fi is an exciting new technology called Mesh Wi-Fi.

What is Mesh Wi-Fi?

Like your current Wi-Fi network, Mesh Wi-Fi uses a router to transmit the Wi-Fi signal your devices connect to. What's different is that it combines the router with a series of small wireless devices—called satellites—which you place in different rooms in your home. These satellites communicate with the router and provide you with a strong Wi-Fi signal everywhere, whether it's your bedroom, your home office, or even your backyard.

What's more, once you're connected to your Mesh Wi-Fi network, there's nothing else you need to do. You can roam freely in your home with any of your devices and not have to worry about losing your connection or dealing with poor performance. The Mesh Wi-Fi system knows where you and your device are at all times and connects you to the nearest satellite.

Advantages of Mesh Wi-Fi

In addition to solving your biggest home Wi-Fi challenges and giving you outstanding performance, Mesh Wi-Fi offers other compelling advantages.

First of all, it's cost effective. You can upgrade to a Mesh Wi-Fi solution that's managed by your service provider for just a few dollars a month.

Second, it's convenient. As part of your monthly service, your service provider manages your Mesh Wi-Fi network for you. So if you do experience any technical issues, your service provider's experienced support team is just a phone call away. They can access your Wi-Fi network remotely, figure out the source of your problem, and make the appropriate changes without having to send a technician to your home.

Contact your service provider today

If you're ready to move on from your current Wi-Fi challenges, contact your service provider. They'll give you everything you need to upgrade your current Wi-Fi network to a high-performance Mesh Wi-Fi system, and provide you the support you need—so you can enjoy worry-free Wi-Fi that just works.
